DVT GLOBAL TESTING CENTRE

WHO WE ARE

The Global Testing Centre is a division of DVT and it was established in 2012. The Centre offers specialised automation testing services to clients based all over the world.

Headquartered in Cape Town, South Africa and overlooked by Table Mountain, the Global Testing Centre addresses the need for quick release cycles. These cycles typically require faster regression testing given that manual testing is unable to keep up with the rapid demand.

Software test automation allows for more frequent testing with faster execution and more coverage.

DVT, founded in 1999, has over 600 members of staff. These skilled men and women service clients from 4 cities in South Africa (Johannesburg, Centurion, Cape Town and Durban) as well as London in the United Kingdom. These offices take care of more than 100 clients in South Africa and abroad. With over 15 years' experience in delivering software solutions to clients across multiple industries, the Group takes pride in building long-term partnerships with clients across the globe.

WHAT WE DO

The Global Testing Centre offers managed outsourced services in automation services by using our proprietary software testing framework. Our expertise and speciality resides in three areas:

- Test Automation
- Performance Testing
- Mobile App Testing

Our framework was developed over a period of three years and caters for various technologies. It is built on open source components that are compatible with most continuous integration tools.

CASE STUDIES

Vehicle Tracking

2 weeks of testing in just 6.5 AUTOMATED hours with 80% coverage.

Parcel Tracking

1 week of testing in just 3 AUTOMATED hours with 65% coverage.

OUR VISION

Ensure our clients get maximum business value quickly by being the smartest and largest specialist outsource software testing centre in the Southern Hemisphere.

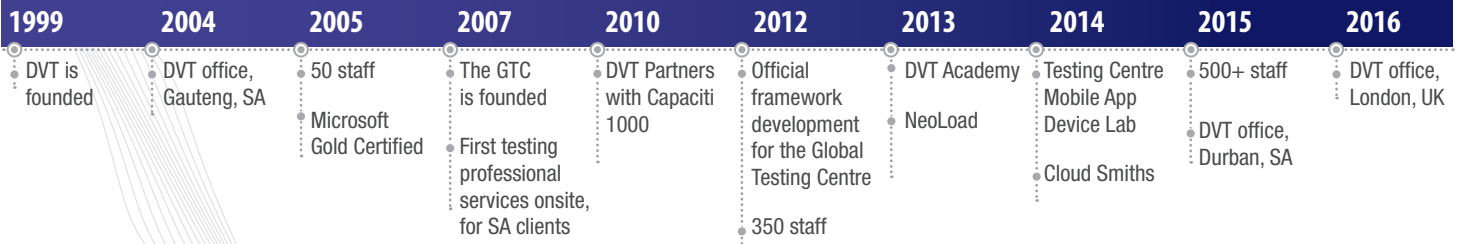

OUR MISSION

To provide superior quality software testing solutions and managed services that:

- Clients recommend to others
- IT professionals want to join
- Our members of staff are proud of
- Tool vendors seek to partner with.

COMPANY HISTORY

LEADERSHIP

BRUCE ZAAZMAN

Director: DVT UK

Bruce Zaayman is passionate about introducing the UK's fast-growing technology and enterprise companies to the potential of South Africa's rich, diverse and highly-skilled software development, testing and automation resources. In his previous role as Practice Head of DVT's Quality Assurance division, Bruce was intimately involved with the creation of the largest specialist software testing centre in the southern hemisphere – DVT's Cape Town based Global Testing Centre (GTC). He is therefore well positioned to detail the efficiencies, productivity advantages and cost-savings in wait for UK companies seeking viable alternatives to their current European and Indian-based outsourcing options.

JACQUES FOUCHÉ

Managing Director: DVT Western Cape and Global Testing Centre

Since Jacques joined DVT in 2007, he has been instrumental in further establishing the brand in Cape Town as a value-adding solutions-driven partner. Jacques is a highly experienced leader with extensive financial services and technology experience both locally and in the emerging markets across Africa and the Middle East. He previously worked for esteemed brands such as Rand Merchant Bank, Nedcor and Barclays.

MARIO MATTHEE

Chief Operating Officer: Global Testing Centre

After holding numerous positions within DVT, Mario was given the opportunity to realise his dream of building the biggest test automation centre in South Africa. Today, he is the Chief Operating Officer at DVT Global Testing Centre and is motivated by his belief that the youth are the future. It is a philosophy that Mario incorporates into his client-centric approach to test automation solutions, by blending experience with young bright talent.

Before joining DVT in 2007, Mario applied his passion for software testing and test automation at Allan Gray, JP Morgan and Vodacom, among others.

"Our approach has always been to offer our clients real solutions. We take them on an upfront journey, sharing insights and lessons learned – ensuring peace of mind."

OUR APPROACH

It's not what we do, but how we do it.

- Mario Matthee, COO, Global Testing Centre

ACHIEVEMENTS

- ✓ Reduced regression testing time from 3 weeks to 45 minutes for a large insurance company.
- ✓ Achieved SAP automation using open source tools.
- ✓ Successfully ported projects on commercial test tools to our open source testing framework – significantly reducing cost of ownership.

3 FLEXIBLE ENGAGEMENT MODEL OPTIONS

We believe clients should have choices, which is why we have three payment solutions:

1. PAY AS YOU GO MODEL

This model is ideal for all mobile app requirements.

2. STANDARD MODEL

Secure capacity for your test automation projects.

3. RETAINER MODEL

Safeguarding your original investment in test automation, with project completion.

ADVANTAGES & BENEFITS

We separate manual and automated testing. This is so that each area enjoys dedicated focus.

1. Availability at short notice. Quick response time to clients' supply and demand.

- Project initiation for test automation projects is 48 hours.
- Mobile app testing lead-time is typically 2 weeks, but this can be shorter depending on capacity at the time.

2. Scalable services and solutions provider. Clients can determine if they want to increase or decrease team size according to budget, time or scope.

- If we have spare capacity, we assign our resources to a clients' project to deliver an added value service or to supplement project speed. This service is implemented at no additional cost.

3. Reduced cost of ownership. We safeguard projects by:

- Always having spare capacity to manage own staff movements.
- Reducing client 'key man' dependencies, thereby reducing overall risk.

- Reducing the need for time consuming and costly recruitment.

4. We're up to the challenge. (We automate anything).

- We add operational value by automating labour intensive business processes so that resources can focus on core business aspects.

5. No or limited capex requirement.

- Our test centre is geared for parallel execution giving clients increased test coverage in a shorter period of time.

6. Collaborative solutions. Responsibility between client and the Global Test Centre / us.

- We use the scrum methodology to complete our projects.
- The role of product owner resides with our client.

7. Access to experts. We share knowledge and expertise between teams and individuals.

- We include research and development on test automation for our clients' software at no charge in order to optimise and make automation more affordable.
